

Amendments to the Specification:

Please replace paragraph [0027] with the following rewritten paragraph:

Preferably, at least one of phthalate ester [dibutyl phthalate (DBP), ~~dioctyl~~-dioctyl phthalate (DOP), benzylbutyl phthalate (BBP), butyl butylene glycol (BPBG)], adipic acid ester [~~dioctyl~~-[dioctyl] adipic acid (DOA)], sebacic acid ester and sebacic dibutyl is contained as the plasticizer. Among them, DBP, DOP and BBP are particularly preferable.

Please replace paragraph [0088] with the following rewritten paragraph:

Viscosity of the electrode level difference absorbing print paste is preferably 4 to 30 Pa·s, and more preferably 7 to 15 Pa·s when being given rotation of obtaining a shear rate of 8[1/s]. When the paste viscosity becomes ~~4 Pa·s or less~~, less than 4 Pa·s, it is liable to cause a trouble that the paste flows out from a mesh of a printing plate making, and when 30 Pa·s or more, it is liable that the leveling declines and a surface shape of the applied film becomes remarkably deteriorated.

Please replace paragraph [0132] with the following rewritten paragraph:

Ceramic powder and subcomponent additives (150g) was added with a dispersant of an ester based polymer (1.5g), an imidazoline based antistatic agent (0.6g), terpeneol (50g) and ~~dioctyl~~-dioctyl phthalate as a plasticizer (5g) and mixed for 4 hours. Next, the mixed solution was added with 8% lacquer (8 wt% of polyvinyl butyral and 92 wt% of terpeneol with respect to the entire lacquer) of BH6 (a polyvinyl butyral resin having a polymerization degree of 1450 and a butyralation degree of 69 mol% \pm 3%) made by Sekisui Chemical Co., Ltd. by an amount of 120g and mixed for 16 hours. After that, 0 to 60g of terpeneol was added for viscosity adjustment to produce a paste.

Please replace Table 7 with the following table:
